

Tip: Reinforce the middle part of the template and the flaps with adhesive tape

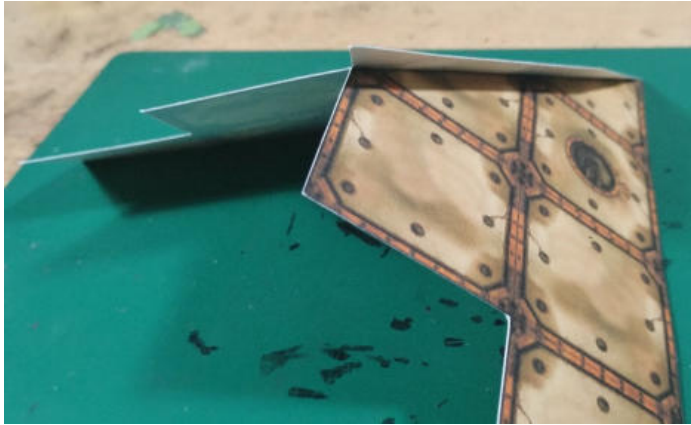

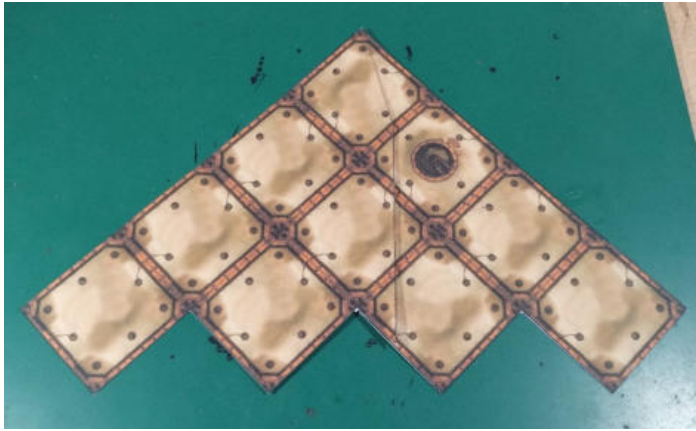

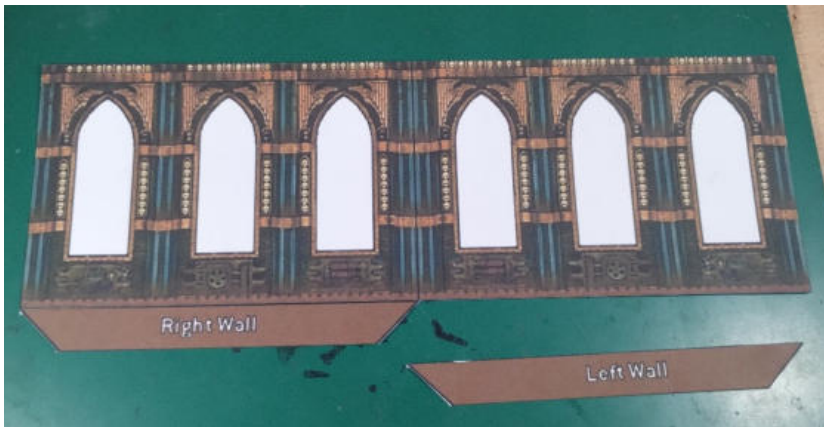

Tip: Reinforce the center part of the floor with adhesive tape

Glue the right part of the floor first, then the left part

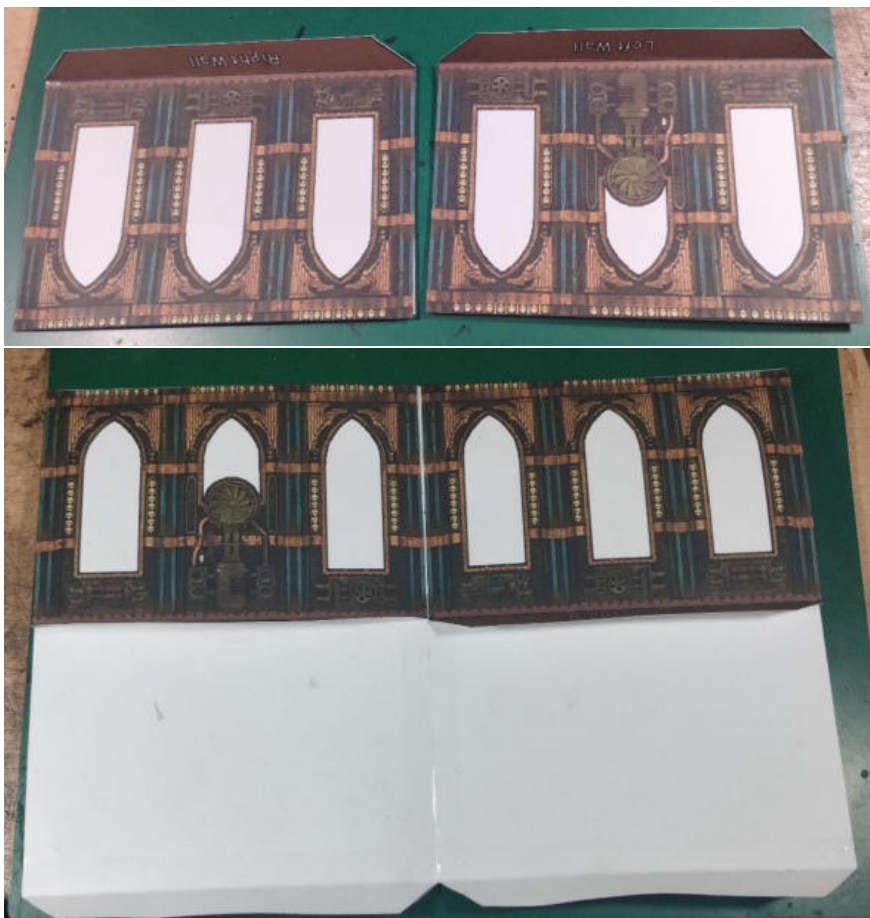

Do not glue the overlap part of the left floor

For the second floor you only need one flap, one for the left wall, and one for the right wall, cut the other one

The flap goes in the interior wall, and is used to support the second floor

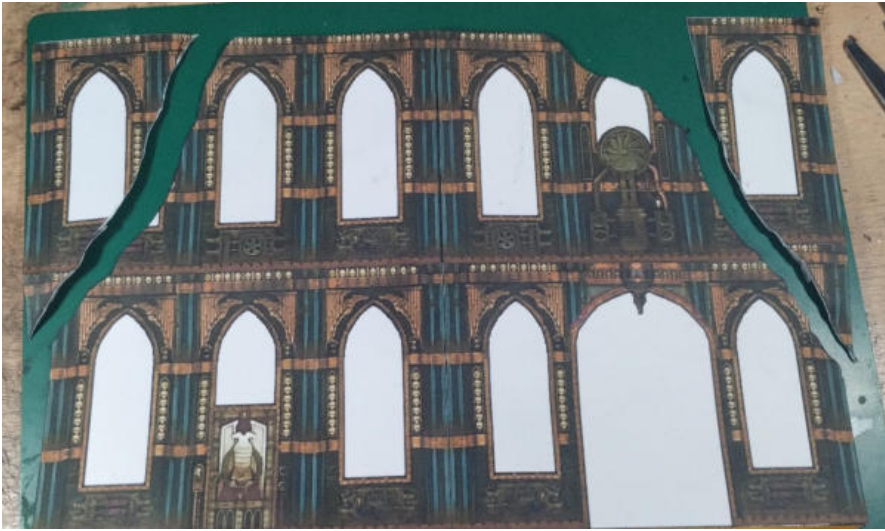

Glue the second floor walls first

For the first floor you don't need flaps, cut both of them

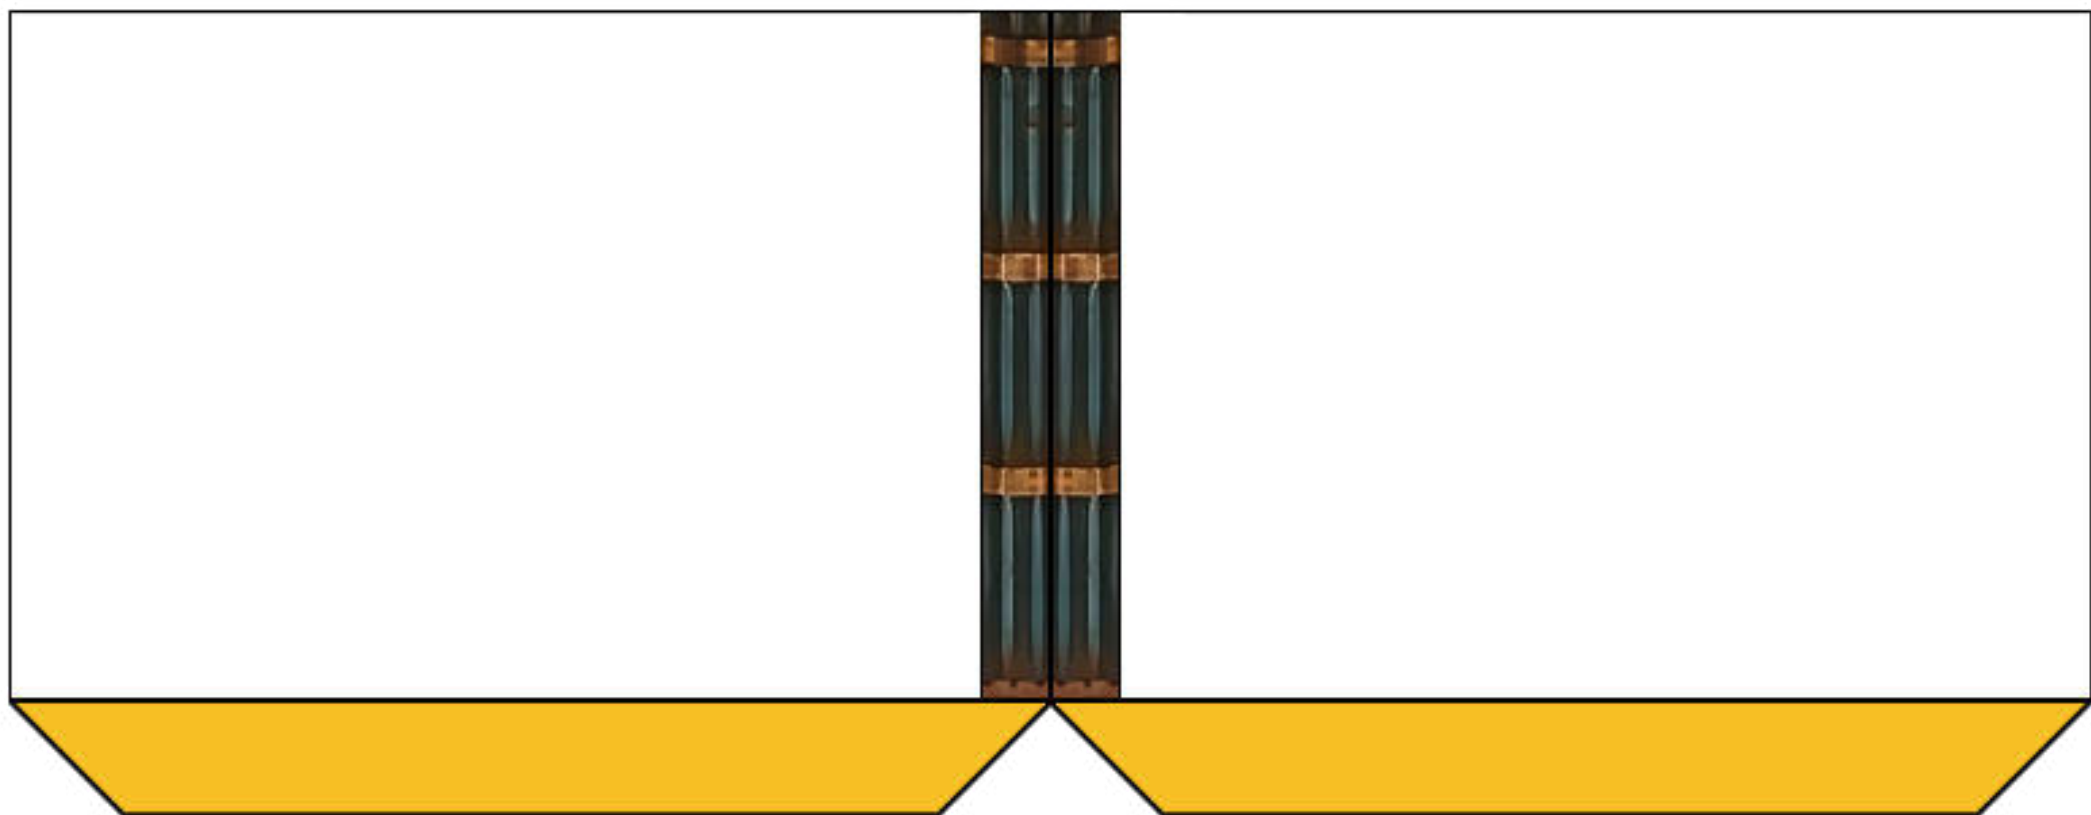

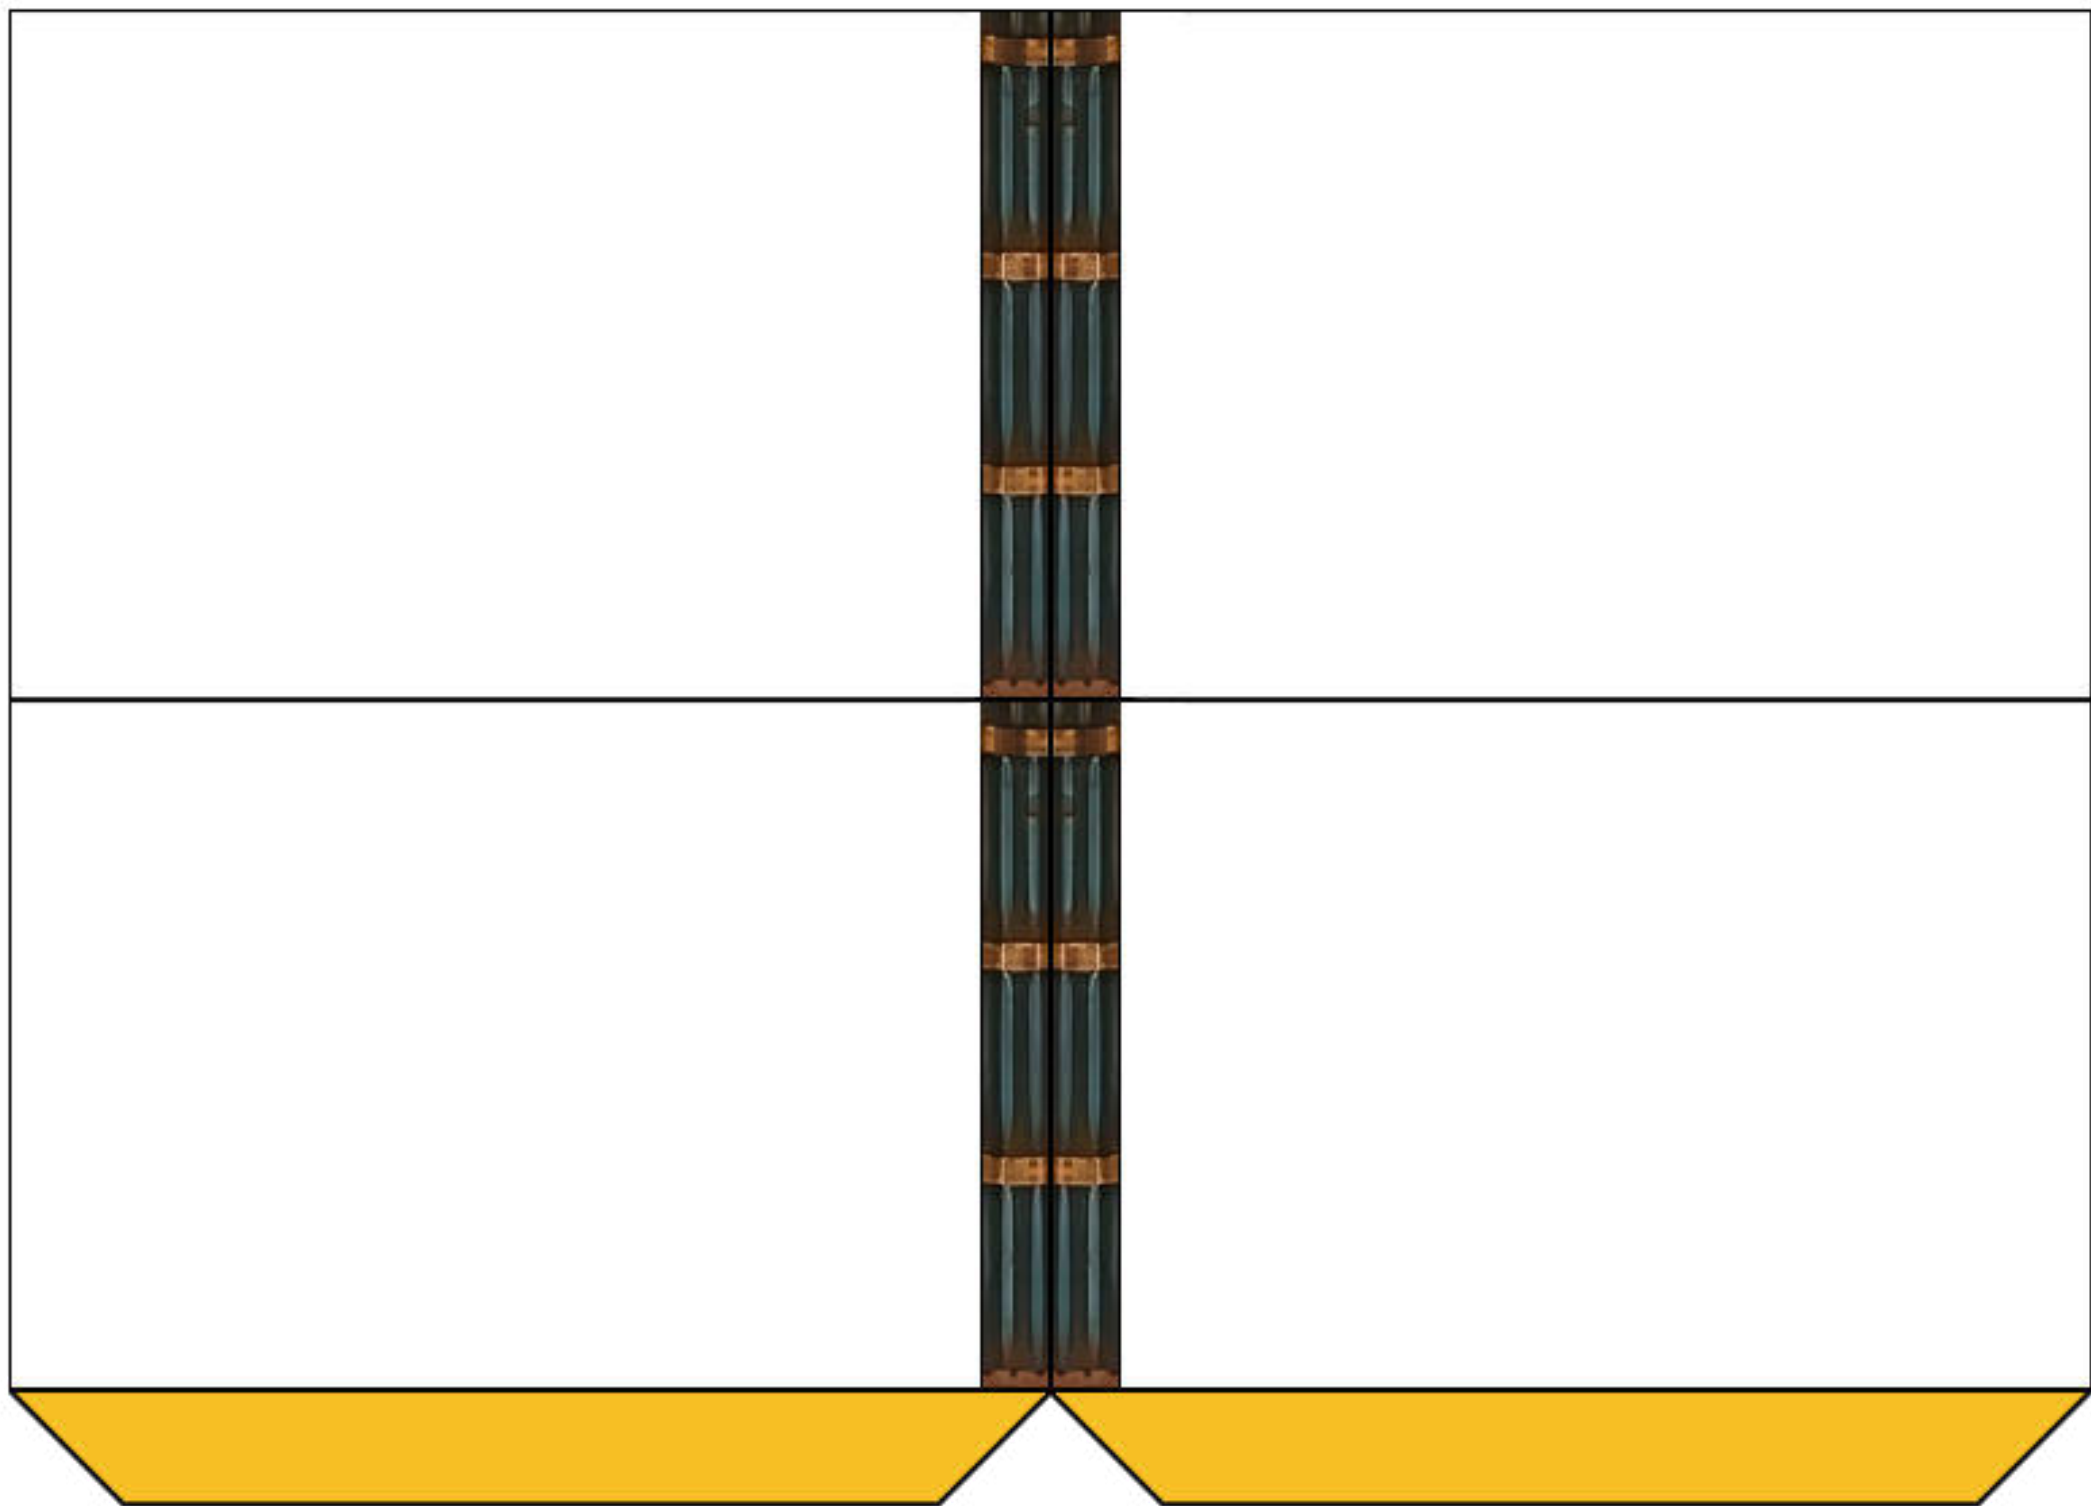

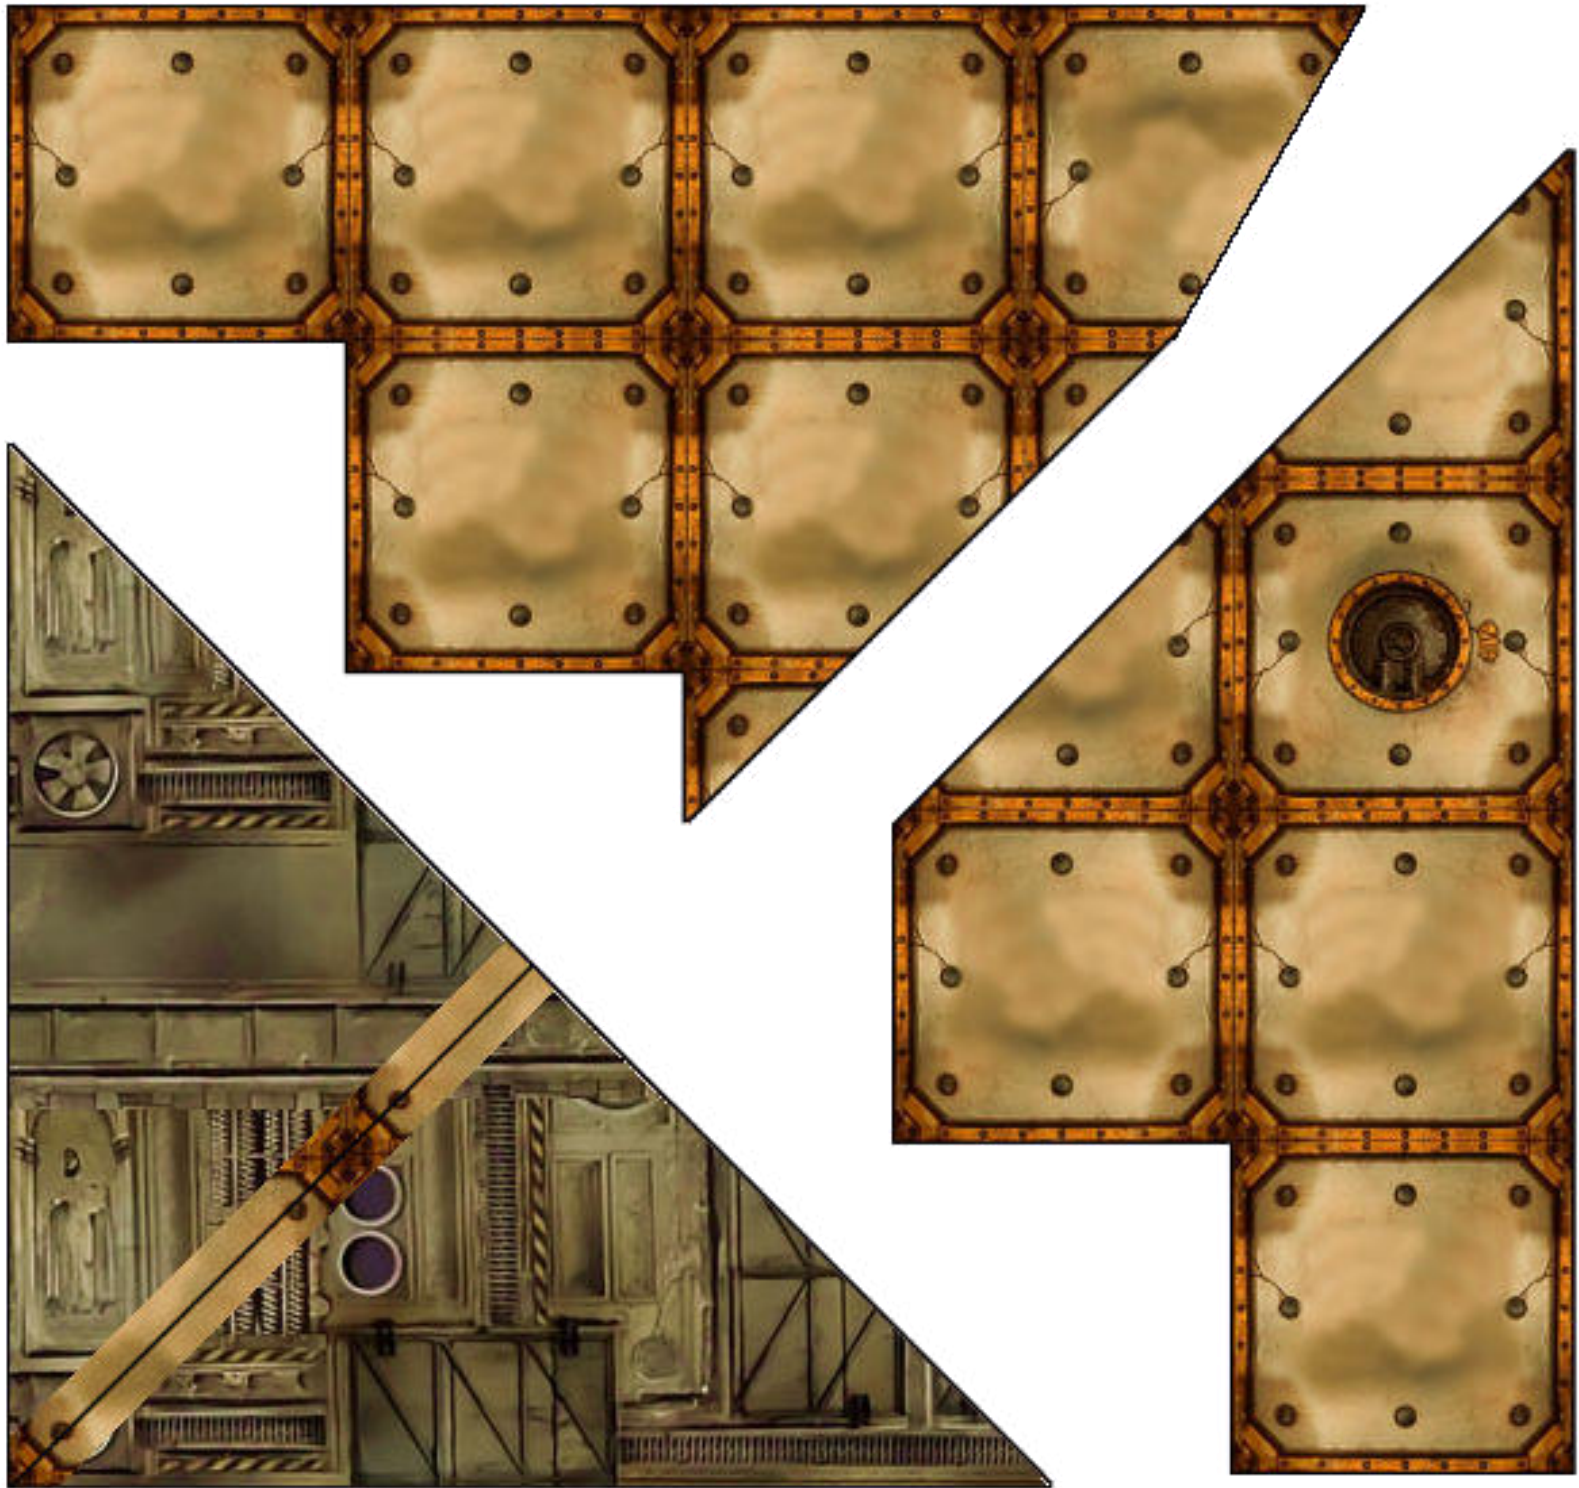

Cut the walls edges and the floor as you like to resemble damage. Glue each floor on the flaps

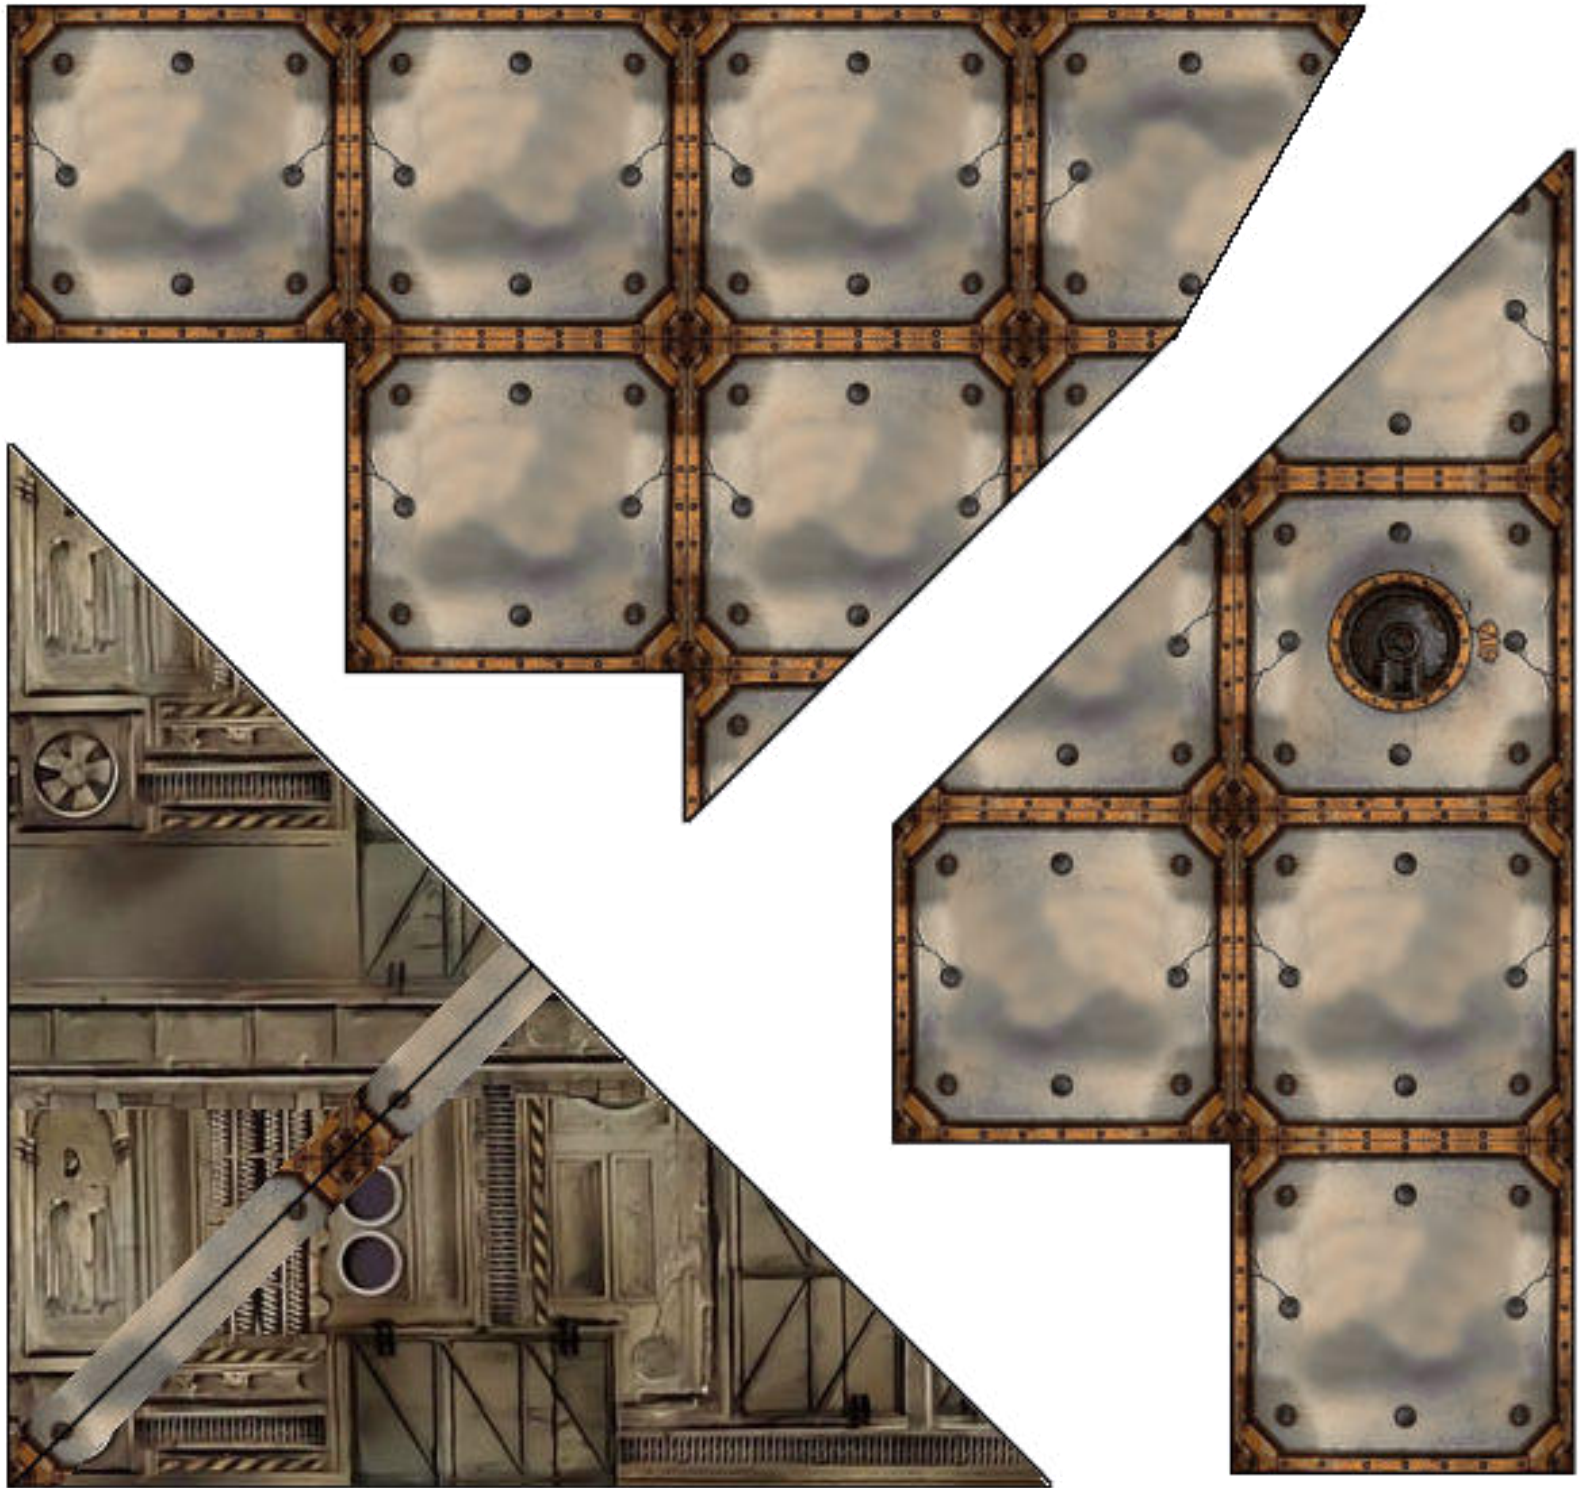

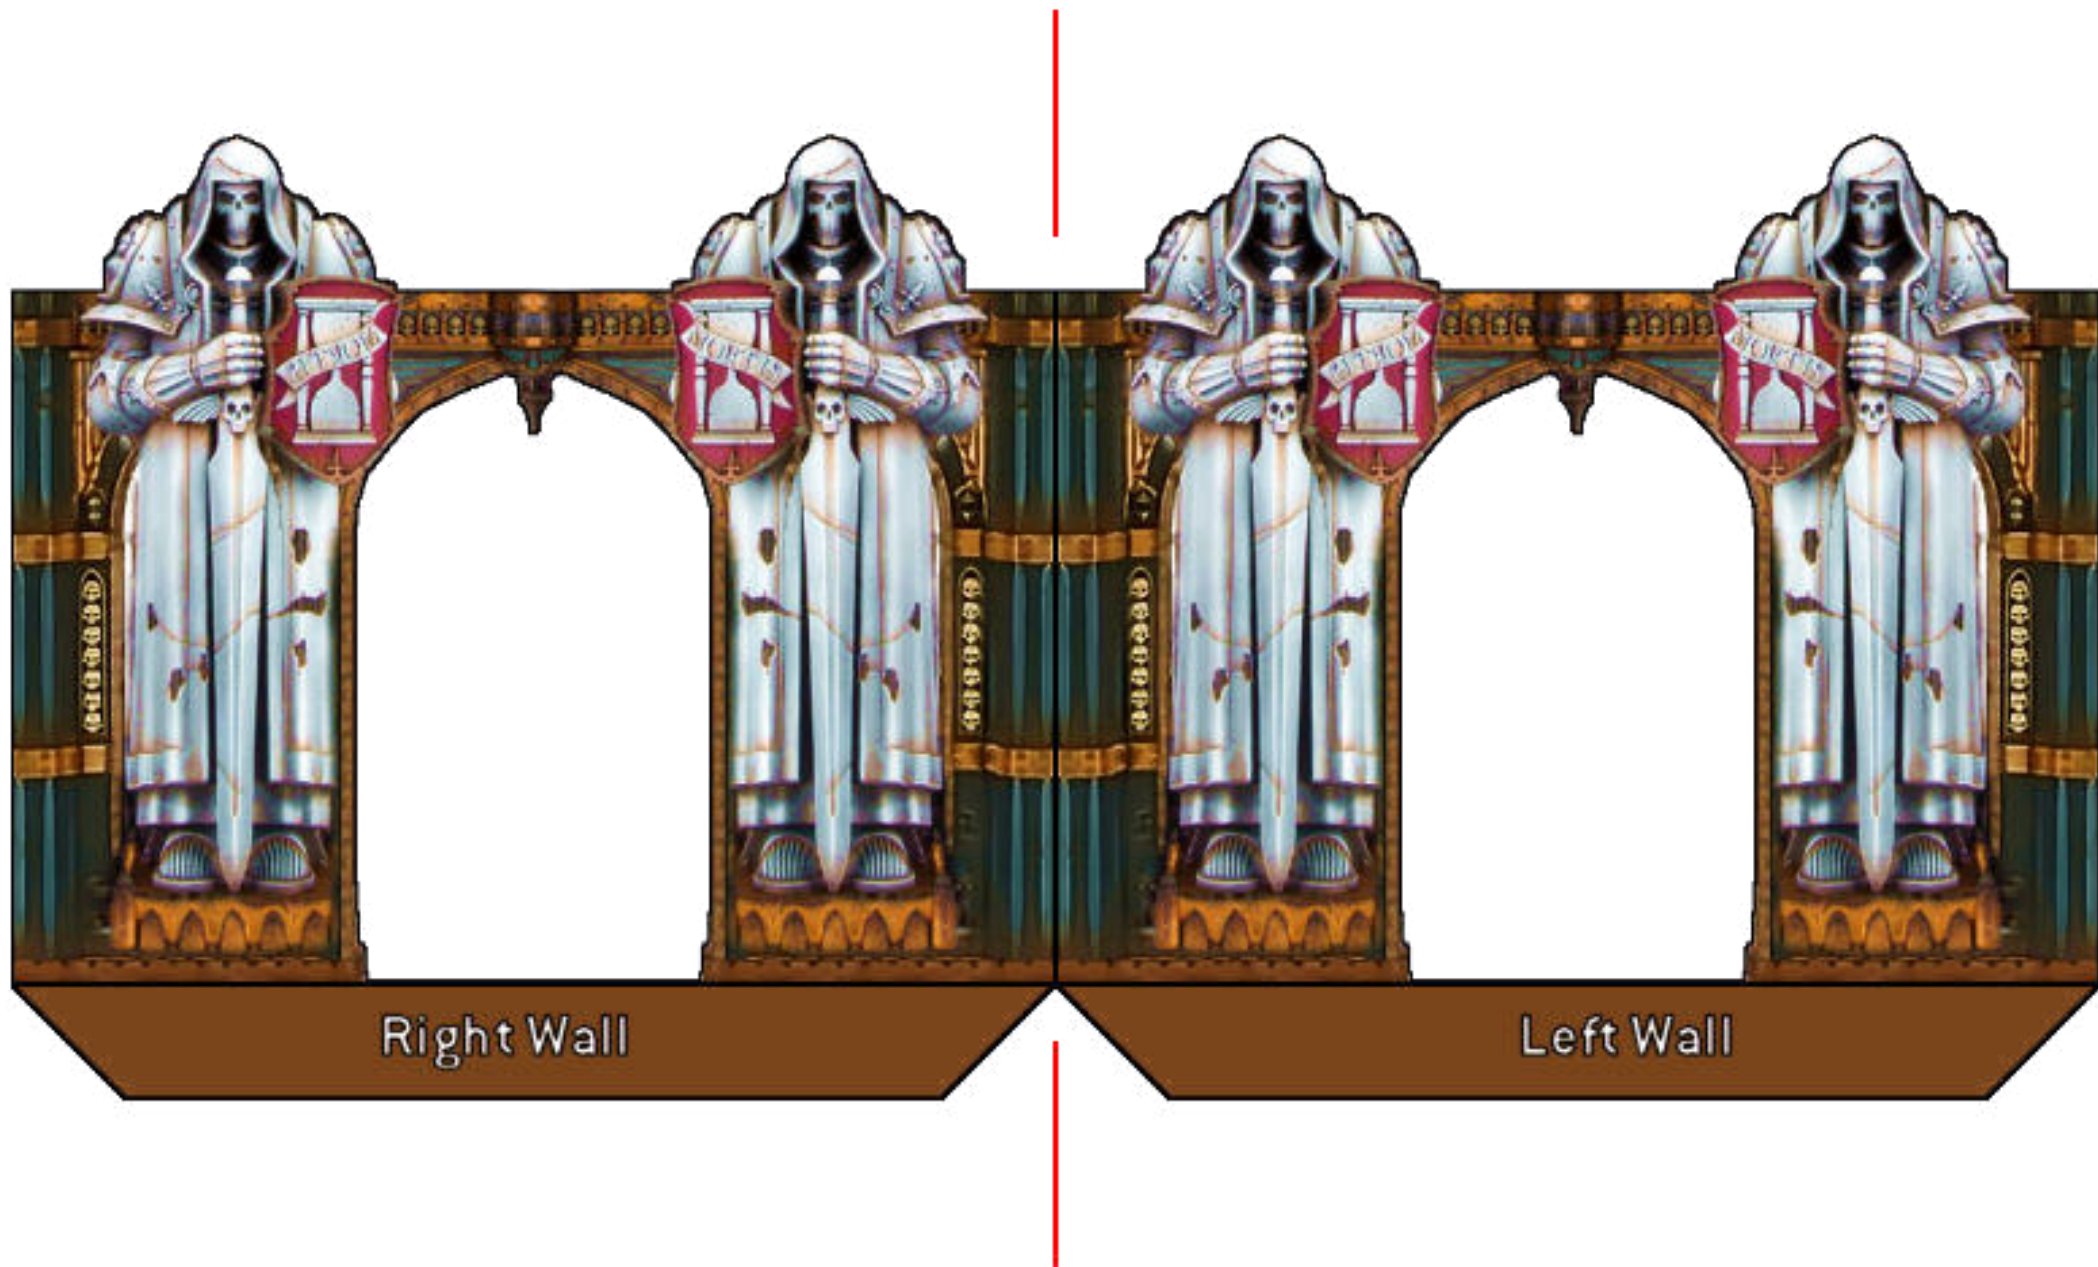

Let the glue dry before fold the building
